🎓 EDUCATION

The University of Texas at Austin

PhD in Robotics, Autonomy and Controls

May 2021 - May 2025

Advisor: [Takashi Tanaka](#), [Luis Sentis](#), GPA: 4.0/4.0

MS in Mechanical Engineering ([Robotics Portfolio Program](#))

Aug 2019 - May 2021

Advisor: [Takashi Tanaka](#), [Luis Sentis](#), GPA: 4.0/4.0

College of Engineering Pune, India

BTech in Mechanical Engineering; GPA: 9.39/10 (Class Rank: 2/185)

Aug 2013 - May 2017

💼 PROFESSIONAL EXPERIENCE

Motional

Remote

Machine Learning Engineer, Prediction

Apr 2026 - Present

- Driving algorithmic and architectural enhancements for Motional's prediction model, expanding **multimodal prediction** capabilities for **VRUs**
- Improving VRU prediction performance for **long-tail**, **safety-critical** scenarios, such as pedestrians at or near crosswalks and jaywalkers
- Rapidly turning research concepts into production-ready safety features, geared toward Motional's [driverless commercial launch](#) with Uber

Tensor Auto (Ex AutoX)

San Jose, CA

Machine Learning Engineer, Prediction & Planning

Jun 2025 - Apr 2026

- Developed a joint prediction and planning framework for interactive, human-like decision-making using **multi-modal foundation models**, **game theory**, and **imitation learning**
- **Led** the end-to-end **ML pipeline** for **autonomous parking**, from data acquisition and sampling to model training, and evaluation
- Developed **simulation environments** for **synthetic training data** generation
- Built a **model-training** framework using data augmentation based on **contrastive imitation learning** to address the challenges of **distribution shift**, **causal confusion** and **learning shortcuts**

Amazon Robotics

Seattle, WA

Applied Scientist II Intern (Vulcan Stow team)

May - Aug 2024

- Built and deployed a **real-time motion planning** algorithm for Vulcan, an 8-DOF manipulator, enabling efficient item stowing and retrieval from densely packed shelves in the Amazon fulfillment centers
- Demonstrated over **95% success rate** in finding feasible trajectories with a **15×** improvement in **planning speed** relative to the original planner
- Integrated a **trajectory re-optimization framework** capable of updating plans online within **60 ms**
- Validated performance through large-scale physical simulations in **Isaac Sim**

Cruise

San Francisco, CA

Motion Planning Intern

Sep - Dec 2023

- Improved the safety and passenger comfort of autonomous vehicle trajectories during **remote assistance**, **auto parking and unparking**
- Validated the developed features through **large-scale simulations** using regression and latency test suites

Apptronik

Austin, TX

Software and Controls Intern

May - Aug 2020

- Developed Hierarchical Dynamic Roadmap, a **sampling-based**, **real-time motion planning** algorithm for Apptronik's robotic manipulators and benchmarked the algorithm in **Gazebo**

RECENT PROJECTS

PhD Thesis: Advancing Frontiers of Path Integral Theory for Stochastic Optimal Control

Advisor: Prof. Takashi Tanaka and Luis Sentis, UT Austin

May 2021 - May 2025

- Developed theoretical frameworks and algorithms to solve **risk-constrained motion planning** via **path integral** control (an approach to synthesize optimal policies **on-the-fly** using Monte-Carlo simulations)
- Developed **digital twins** (physical simulators) of systems like quadcopters for simulation-driven control

Master's Thesis: Safety-based Motion Planning in Uncertain Environments

Advisor: Prof. Takashi Tanaka and Luis Sentis, UT Austin

Aug 2019 - May 2021

- Developed algorithms to estimate **end-to-end collision probabilities** of **motion plans** for autonomous agents with discrete and continuous-time dynamics, navigating in **uncertain environments**
- Incorporated the developed risk estimation framework in motion planners to generate **optimal safe trajectories** in the presence of uncertainties

Reinforcement Learning Based Risk-Bounded Motion Planning

Advisor: Prof. Peter Stone and Scott Niekum, UT Austin

Jan - May 2022

- Proposed an extension of **semi-gradient SARSA** and **TD(0)** algorithms to solve **risk-bounded motion planning** and end-to-end **risk estimation** problems for autonomous vehicles in continuous-space. The proposed model allows the user to adjust the **risk-averse level** of the autonomous agent.

+ SKILLS

Languages: Python, C++, **Tools and software packages:** MATLAB/Simulink, PyTorch, TensorFlow, ROS, OpenCV, NuSMV, Slugs, PRISM, LabVIEW, AutoCAD, SolidWorks, ANSYS, ParaView, MeshLab, Git, Isaac Sim

AWARDS, ACHIEVEMENTS AND POSITIONS

- **Reviewer:** TAC, CDC, ACC, ECC, IFAC WC
- **Best Student Paper Award**, Modeling, Estimation and Control Conference (MECC) 2025
- **CDC 2022 Student Travel Support Award**, IEEE Control System Society 2022
- **H. Grady Rylander Excellence in Teaching Fellowship**, UT Austin 2020
- **TCS Best Student Award**, College of Engineering Pune, India 2017
- **Best Bachelor's Project Award**, College of Engineering Pune, India 2017
- **S. N. Bose Fellowship** for a research internship in the USA (1 in 47 students across India) 2016
- **National Robocon:** Winner 2017, Runners-up 2016, Best Innovative Design 2015
